

FOR IMMEDIATE RELEASE

Wolverine Tackles Office Renovation Challenges.

Grand Rapids, MI – (November 24, 2008) Wolverine Building, Inc. recently completed a small but remarkable expansion project for Pitney Bowes, a leader in business insight, customer engagement, mail solutions, and workflow management.

Success for Pitney Bowes grew as did their International relations. The server room at their West Michigan Office on 4460 44th Street needed space to expand equipment. Robert Grooters Development Company, developer of the professional office building with Turnbull Poppleton & Associates construction consultants hired Wolverine to head the expansion project. The largest challenge for Wolverine was to perform the construction without disturbing the computer server that delicately holds the bulk of the daily national and international business at Pitney Bowes. The team at Wolverine successfully secured all technical equipment with a dust-free enclosure while performing selective demolition within the room to allow for it's expansion. In addition the entire 33,000 sq. ft. office area underwent a face lift of new carpet and re-painting throughout the entire office space. The server room expansion and office remodeling work was a fast-track project leaving 150 employees undisturbed during the 8 week renovation period. No employees had to be relocated off site during the work, which was the criteria Pitney Bowes had when beginning the project.

A Pitney Bowes representative stated, "We went into the project expecting problems, much to our surprise and delight there were none. The project finished ahead of schedule with no glitches. I was surprised by how well the team of venders and sub-contractors worked together to get the project done".

Wolverine Building, Inc. is a full-service general contractor with more than 68 years of experience providing exceptional construction services to industrial and commercial clients throughout West and Central Michigan.
